## BPL\_TEST2\_Fedbatch - demo

In [1]: run -i BPL\_TEST2\_Fedbatch\_fmpy\_explore.py

Windows - run FMU pre-compiled JModelica 2.14

Model for bioreactor has been setup. Key commands:

- par() change of parameters and initial values
- init() change initial values only
- simu()- simulate and plot- newplot()- make a new plot
- show() show plot from previous simulation
- $\operatorname{disp}()$   $\operatorname{display}$  parameters and initial values from the last simulation
- describe() describe culture, broth, parameters, variables with values/units

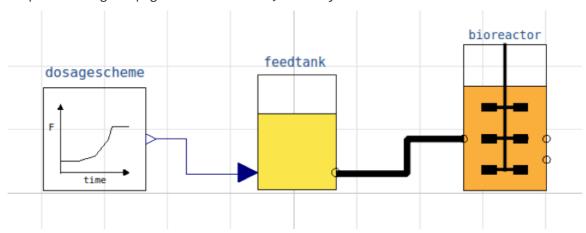

Note that both disp() and describe() takes values from the last simulation and the command process\_diagram() brings up the main configuration

Brief information about a command by help(), eg help(simu)
Key system information is listed with the command system\_info()

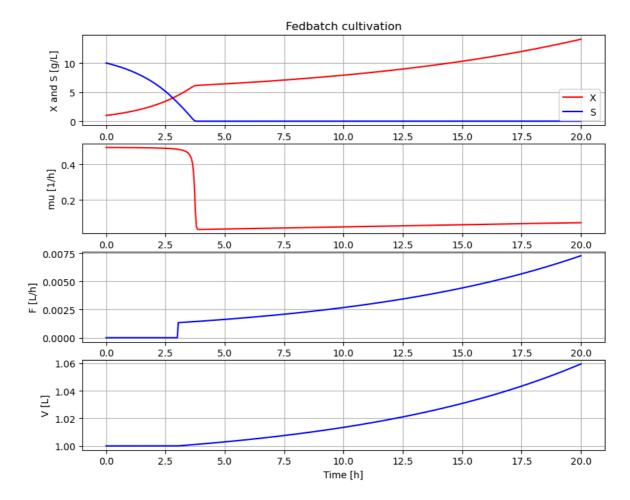

```
In [2]: %matplotlib inline
  plt.rcParams['figure.figsize'] = [25/2.54, 20/2.54]
```

In [3]: process\_diagram()

No processDiagram.png file in the FMU, but try the file on disk.

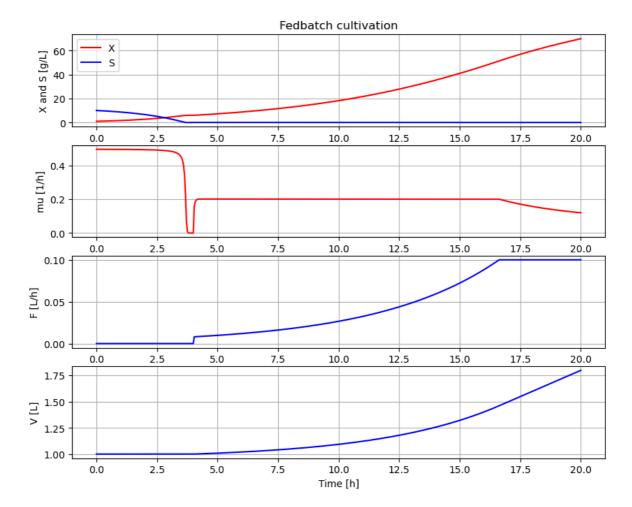

```
In [4]: # Simulation with default values of the process
newplot(plotType='TimeSeries')
simu(20)
```
