BPL_TEST2_Fedbatch - demo

```
In [1]: run -i BPL_TEST2_Fedbatch_explore.py
         Windows - run FMU pre-compiled JModelica 2.14
         Model for bioreactor has been setup. Key commands:
                         - change of parameters and initial values
          - init()
                         - change initial values only
                         - simulate and plot
          - simu()
          - newplot()
                         - make a new plot
          - show()
                         - show plot from previous simulation
                         - display parameters and initial values from the last simulation
          - disp()
          - describe() - describe culture, broth, parameters, variables with values / unit
         Note that both disp() and describe() takes values from the last simulation
         Brief information about a command by help(), eg help(simu)
         Key system information is listed with the command system_info()
In [2]: %matplotlib inline
