BPL_TEST2_Fedbatch - demo

In [1]: run -i BPL_TEST2_Fedbatch_explore.py

Windows - run FMU pre-compiled JModelica 2.14

Model for bioreactor has been setup. Key commands:

- par()change of parameters and initial values
- init() change initial values only
- simu() simulate and plot
- newplot() make a new plot
- show() show plot from previous simulation
- disp() display parameters and initial values from the last simulation
- describe() describe culture, broth, parameters, variables with values / unit

Note that both disp() and describe() takes values from the last simulation

Brief information about a command by help(), eg help(simu)
Key system information is listed with the command system_info()

In [2]: %matplotlib inline
plt.rcParams['figure.figsize'] = [25/2.54, 20/2.54]

In [3]: # Simulation with default values of the process
newplot(plotType='TimeSeries')
simu(20)
